SPA LINE

DESCRIPTION

A hydrating body wrap with remineralizing, revitalizing and energizing properties. Cherries are rich minerals, vitamin A, C and B, flavonoids and ellagic acid.

FEATURED ACTIVE PRINCIPLES

Laminaria digitata

Due to its content in laminarine, marine mud, fucosterol and alginic acid, slimming, sebostatic, normalizing and rebalancing properties of the epidermis. Belonging to the family of brown algae or neophytes and grow mainly on the underwater rocks of the Atlantic. This alga contains among others components the mucilages that are conferred the emollient and tensor properties and therefore firming. They take into account that they also contain large amounts of iodine for what is indicated for inclusion in slimming preparations and reducers.

Lithotamnium

It belongs to the family of red algae. It has the appearance of coral, and is covered by a red pigment Very characteristic. It is extracted on the British coast, more specifically in the Bay of Morlaix and the Glenan Islands. It is between 10 and 25 meters below sea level. This seaweed is bathed in marine limus, with high Concentrations of minerals, and next to its coral aspect is called, Coral sand. This commodity algae can not use the technology of this algae. In cosmetics, thalassotherapy treatments, in diets, and has a high therapeutic power thanks to its high content in Calcium and magnesium.

RESULTS

It promotes the expulsion of impurities and the mobilization of waste. It has a solvent and decongestant action, stimulating the metabolism of tissues.
